A. Warm summer promotes high reproductive state
Spring frost
High flowering
Spring
Transition from low to high
High investment in buds
Warm summer
Summer and fall
3 years
Bud
Flower
Fruit
High fruit load prevents investment in buds
Transition from high to low
Summer and fall
Spring
Low flowering
B. Reproductive constraints cause alternate bearing
Spring
Low flowering
Summer and fall
Persistence in low
Cold summer
C. Cold summer maintains low reproductive state
D. States correspond to different seed production
Two reproductive states
Only one state
Density
Seed production
