A
Hypothetical two-year cycle
(idealized alternate bearing)
Winter
Low seed count
Autumn
Spring
Flowering
Floral bud differentiation
Summer
Fruit development and maturation
Summer
State transition
Spring
Autumn
High seed count
Winter
B
Two states
Only one state
Density
Seed count
C
Year n+1
Low
High
Year n
Low
High
Transition matrix
Reproductive constraints
Temporal overlap between fruits of the current year and floral buds for the next year
D
Warm summer
Constraints
Cold summer
Cold summer
